# TODOitall

An Offline-first TODO single page angular app with back-end user authentication and data storing

---

## Developers

Jeffery Egly  
Jonathan Thall  
William Brownson  
Charles Lambert  
Wayne Buckhanan

## Built with

- [AngularJS](#) - A JavaScript web framework
- [CouchDB](#) - a NOSQL Database
- [Angular Material](#) - A CSS framework created as a reference design of Google's material design
- [PouchDB](#) - A front end database and API built to sync with CouchDB ## Requirements

## Setup

### NPM

Windows - Download and run the Windows installer [here](#)

Linux - Follow the guide [here](#)

Mac - Download and run the Windows installer [here](#)

### Bower

After you have installed NPM simple run `npm install bower`

### Compass

You will need to install compass which is a ruby gem  
Run `ruby gem install compass`

### CouchDB

Windows - Follow the CouchDB installation guide [here](#)

Linux - Follow the CouchDB installation guide [here](#)

Mac - Follow the CouchDB installation guide [here](#)

To setup CouchDB first follow this guide [here](#)

Next we need to add CORS

Install CORS script

```
npm install -g add-cors-to-couchdb
```

Next run it

```
add-cors-to-couchdb
```

### App

Finally to download the app we will clone the repository from git with this command `git clone https://github.com/WayneBuckhanan/TODOitall.git` then cd into the app directory and run `sudo npm install && bower install`

## Operation

To run a live preview of the app simply run `grunt serve`

# Generated user stories describing what the client wanted

Raw Blame History

## User Stories

*As a business user, I want to capture ideas/tasks/etc on the go so that I can remember to deal with them all later*

*As a business coach, I want to work through my client's braindump list so that we can identify important tasks and support them in making them happen*

*As a user, I want to have a clear intention or reason for working on a task so that I am more likely to work on the "right" tasks and finish them*

*As a coach, I want my client to have a clear intention or reason for working on a project so that I can help them focus on the tasks that matter*

*As a productive tension trained coach, I want to be able to map tasks to the ChangeGrid(R) so that I can quickly see where my client's productive tension and engagement are so that I can recommend support activities so that my client can accomplish their important goals so that I can show clients the ROI from hiring me*

*As a business user, I want to be able to filter my tasks quickly so that I can be more likely to spend time on tasks that matter so that I can reach my bigger goals so that I can get that promotion so that I can provide for my family so that they know how much I do for them*

*As a mobile user, I want to be able to access my lists when online or off so that I can work from wherever and not fight with connectivity when I am adding to/reading from my list/s*

*As a manager, I want to be able to delegate tasks and schedule items from within the app so that I can be more efficient with my time and only have to "handle" that task once*

*As a manager, I want to be able to quickly follow up on delegated tasks so that nothing falls through the cracks*

*As a user, I want to choose between opportunities so that I can leverage my resources by completing projects so that I can generate additional resources so that I can work on bigger and better projects so that I can help more people*

*As a business user, I want to work on tasks that will give me the best ROI for resources invested so that I generate more value so that I can have a better life*

*As a user, I want to be able to tell what tasks are high leverage so that I can get more "bang for my buck" so that I can get bigger results with less effort*

*As a business user, I want to be able to recognize mission critical tasks so that I can focus on the tasks that are important for reaching my goals so that I can reach my goals more quickly and easily (at all!)*

*As a project manager, I want to be able to track what tasks depend on other tasks so that I can prioritize and plan (and maybe draw Gantt-style charts)*

*As a new user, I want to create an account and "projects" with lists of tasks so that I can use the platform and be able to group tasks and share those groups with others*

*As a new user, I want to be guided through creating my first project and prioritizing task/s so that I can quickly understand how to use the platform and see the difference between it and another arbitrary tool*

*As a project manager, I want to be able to move tasks from my default "project" list to other projects so that I can brain dump without worrying about where it belongs, then sort things into different projects/lists when I'm doing my other sorting/prioritizing steps*

*As a , I want so that*

## Filters

- Mission critical, mission incidental, mission optional
  - identify which "mission" / project
  - frame importance in terms of the mission / why?
- Income/resource/MITEAM generating, conserving, consuming
  - expected returns (for ROI calculations)
- Effort vs Value (0-8)
- Ability vs Challenge (0-12)
- generate recommended action for each task after filter is applied
  - actions: dump, delegate, schedule, apply additional filter/s
  - chain filters, apply sequentially, default order

## **Narrowed user stories to set features and tasks**

### **Derived Tasks**

Persistent storage of tasks

Set tasks as active/finished

User

- Roles

- Permissions

- Sharing

Filters for tasks

- Priority high, priority medium, priority low

- Mission critical, mission incidental, mission optional

- Income generating, income conserving, income consuming

- Effort vs Value (0-8)

- Ability vs Challenge (0-12)

Generate recommended action for each task after filter is applied

- i.e., calculate expected returns for ROI calculations

Ability to dump, delegate, schedule, and apply additional filters

Multiple projects for each user with multiple tasks and multiple users

Delegation of tasks by managers

Offline first storage

- Both an online and local database.
